The Plague Doctor: A Promising Cure for the Window Plague
window plague is the tendency of IDEs to quickly become overcrowded by unused windows (or tabs) Figure 1 shows an IDE after only a few minutes of development manifesting the window plague Moreover, IDEs do not keep track of relationships among windows and provide little or no support to automatically maintain a low level of entropy inside the

Critical and Topological Properties of Cluster Boundaries ...

Abstract We analyze the behavior of the ensemble of surface boundaries of the critical clusters at T = T c in the 3d Ising model We nd that N g(A), the number of surfaces of given genus g and xed area A, behaves asA−x(g) e− AWe show that is a constant independent of g and x(g) is approximately a linear function of gThesumof N g(A) over genus scales as a power of A
